The Condition Based Maintenance network (CBM) exists to establish, promote and share best practices and lessons learnt amongst its membership. It is primarily focused on the upstream oil and gas sector, and condition-based maintenance (CBM) ranging from platform topsides dynamic (eg rotating) and static applications, to seabed and downhole systems.

Discussions featuring:

Optimization of KPIs to monitor contract and CBM effectiveness

Management and integration of general and specialist condition monitoring services in the industry

Novel techniques and technologies for CBM

State-of-the-art in maintenance management systems
